

P2CODE

Programming Platform for Intelligent Collaborative Deployments

Enabling intelligent, collaborative application deployment
and management through an open, secure, and
programmable IoT-to-edge-to-cloud platforms across
trusted, distributed infrastructures

OBJECTIVES

Infrastructure
management layer (IML)

Application and business
programmability stratum (ABPS)

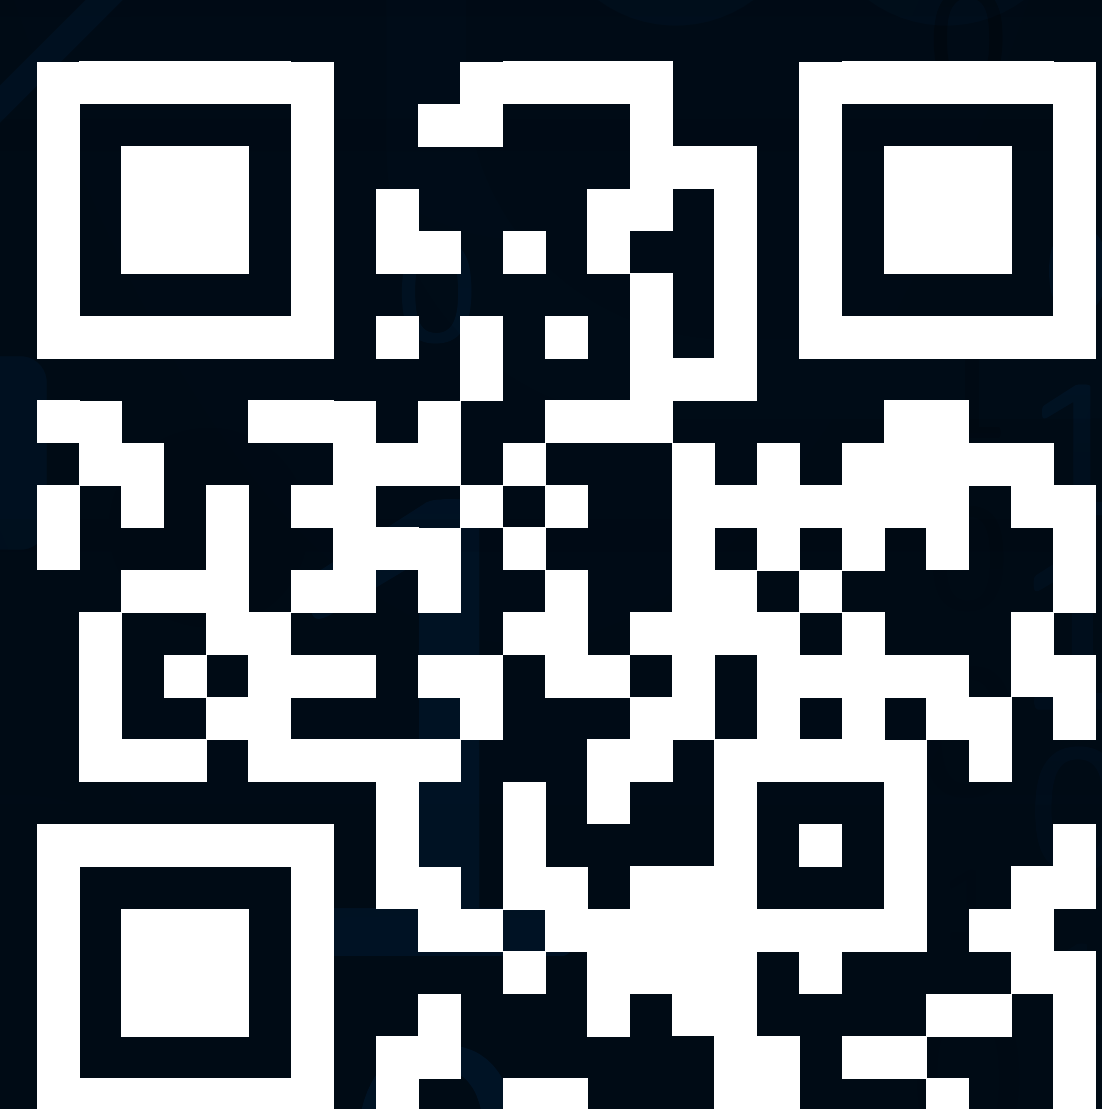

Open and extensible
programming toolset

Framework for
data distribution and IoT

Reference cloud-managed testbed

Co-funded by
the European Union
